Education

Government Engineering College, Thrissur Aug 2024 – Present
B.Tech in Electronics and Communication Engineering
CGPA: 8.47/10

Nirmala Matha Central School Thrissur 2022 – 2024
Higher Secondary Education
Percentage: 93.4%

Relevant Coursework Digital Electronics, Microprocessors, Analog Circuits, Python Programming

Technical Skills

Languages: Python, C/C++, Embedded C, VHDL/Verilog, HTML, CSS, JavaScript
Tools: Git/GitHub, AI based tools, Proteus, LTspice, KiCad, Keil, Overleaf, FPGA, Flash Magic
Areas: Embedded Systems, PCB Design, Digital Electronics, Analog Circuits

Experience

SAE FKRC (EV Division) Jan 2026 – March 2026
Chassis and Electronics Team Member

- Designing and implementing chassis structure for the kart
- Developing starting sequence circuitry for reliable vehicle ignition and control
- Developing the CAN module for the kart.
- Testing and validating circuit designs for safety and performance standards

Projects

8051 Digital Voltmeter *8051, Proteus, Keil, Embedded C*

- ADC0808 interfaced with 8051 microcontroller displaying voltage readings upto 5V on LCD
- Fully simulated in Proteus before hardware implementation

UART Simulation *VHDL, Vivado*

- Simulated a two node UART protocol receiver transmitter module.
- Whole module is synchronized with baud rate generator module al everything is controlled using a top module.

Power Supply *Analog Electronics*

- Built an 0-18V variable power supply
- It can support dual supply

WiFi Controlled Car *ESP32, C++, IoT*

- Built an ESP32-based remote-controlled vehicle with a browser-accessible WiFi control interface
- Demonstrated end-to-end IoT integration: wireless protocol and motor driver control

Automatic Street Light PCB *Proteus, KiCad*

- Designed the circuit using LDR and BJT
- Simulated the circuit in Proteus before designing the PCB using Kicad
